

Insights

Insight 1: Top Performing Brands

The analysis shows that Samsung and Apple has the highest share of total revenue as most of this brand products showcased high sales and generated a lot of revenue. This indicates that these brands have a strong market influence and customer attraction

Insight 2: Regional Sales Performance

The central region recorded the highest sales as compared to the other regions which suggests a stronger purchasing power, better product distribution and customer attraction on products based on the factors including but not limited to better product advertisement, discounts and customer satisfaction

Insight 3: Customer Preference by Specifications

Devices with 8GB and 12GB RAM recorded the highest sales volume in the mobile sales data. This indicates that customers prefer mid-range devices over premium high-spec models. For future decision making, the company might want to focus more on the mid-range devices to increase the revenue and customer demands efficiently

Recommendation

The company should focus on stocking more mid-range devices for the purpose of meeting the customer demands and increased revenue. The company should also supply more in central regions which showcased the highest sales and also improve the distributions and logistics in the east to increase the sales performance as it showed the lowest sales. Finally, the company should increase promotions and discounts for best-selling brands e.g apple and samsung.
